Logan Aluminum Employees Reach Five Million Safe Work Hours Without a Lost-Time Accident

Russellville, KY, July 11, 2007 – Logan Aluminum personnel reached a safety milestone on July 8 by working five million safe work-hours without a lost-time accident. Logan has never before achieved this milestone in its nearly 25 years of operation. The first product was shipped from Logan in October, 1983. On Wednesday, July 25, the company will celebrate this milestone with a special meal served by local plant management and shareholder representatives.

Tim Anderson, Manager of Environmental, Safety and Security, credits Logan's comprehensive environmental, health and safety process and the engagement and ownership of that process by the employees for being able to achieve more than 2 ½ years since the last lost time accident. "Safety is a core value within Logan's Culture" according to Anderson. One of the many elements of the EHS process that Logan team members utilize is a Behavioral Based Safety approach. More than 1000 of Logan's employees have been trained to observe jobs and tasks using this approach to understand the risks involved so the work can be performed safely. Risk identification and elimination is a primary tool in creating a safe workplace. The participation of all Logan personnel in the recognition and control of risks is considered to be a significant contributing factor to Logan's success.

Achieving this milestone for the first time since the plant began operation is even more gratifying given the fact that employment has now grown to over 1000 people and plant output is more than 5 times its original capacity. Currently, Logan ships enough aluminum sheet to account for nearly 40% of North America's beverage cans.

An integrated environmental and safety management program has been implemented and Logan is both OSHSAS 18001:1999 certified and ISO 9001:2000 certified. This program, along with Behavioral Based Safety, provides for the incorporation of EHS into all facets of Logan including planning, management of change, daily operation, and non-routine tasks. Comprehensive training is a segment of Logan's culture that provides employees with a sound platform upon which to maximize their risk control effectiveness.

Located in south western Kentucky, the Logan facility is jointly owned by ARCO Aluminum Inc. and Novelis. It is a world class manufacturer of Aluminum sheet products with capabilities and experiences in fabrication of rigid container sheet, building products, automotive sheet, distributor sheet, and food can stock markets since 1983. It is a premier manufacturing facility with modern high-speed equipment and technology available in the operational areas of ingot casting, hot rolling, cold rolling and finishing.
